

# LI-RADS Score for CT/MRI - Report

## Patient Information

### Identification Data

Test/Patient ID: LIR00000002

### Personal Data

Gender: Female  
Age: 72

## CT/MRI Information

### Masses

Positive Nodule Findings: Yes, Masslike  
Diameter (mm): 24  
Arterial Phase: Hyperenhancement  
Venous Phase: Hypoenhancement  
Late Phase: Hypoenhancement  
Capsule Enhancement in Arterial Phase: No  
Capsule Enhancement in Venous Phase: Yes  
Capsule Enhancement in Late Phase: Yes  
Masslike Growth: < 10 mm/year  
Tumor in Veins Lumen: No  
Disappearance without Treatment: Unknown

### Auxiliary Features

Corona Highlight: Yes  
Diameter Stability for 2 Years: No  
Diffusion Restriction: No  
Intralesional Fat: Yes  
Lesional Fat Sparing: No  
Lesional Iron Sparing: No  
Mild T2 Hypersensitivity: No  
Mosaic Appearance: No  
Nodule-in-Nodule Appearance: No

## Outcome

### CT/MRI Results

According to CT Scan/Magnetic Resonance Image (MRI) Information, there is a HIGH RISK (LI-RADS Score = 5) of having LIVER CANCER.

### Conclusions

WE SUGGEST DEFINITELY HEPATOCELLULAR CARCINOMA, PURSUANT TO THE LIVER IMAGING REPORT AND DATABASE SYSTEM (LI-RADS).

This report has been generated from the data entered on 26-02-2017 12:16:56 UTC/GMT.

### Disclaimer

Blueberry Diagnostics Inc. has not developed the Liver Imaging Report and Database System (LI-RADS). LI-RADS was developed in 2011 by the American College of Radiology (ACR) as a method to help in radiology findings classification. Its mission is to standardize the terminology and the systematic for the radiological report, categorize injury by establishing a degree of suspicion, as well as assign the attitude that should be taken in each case. Blueberry Diagnostics Inc. has implemented it for training or educational purposes only. You assume total responsibility for your use.
